

**PATIENT**

Rambo Chojnacki

PRESENTING CLINICAL SIGNS

has history of limping and licking front left paw since November 2021 Both x-rays from 11/12/21 to 09/27/22 are available for comparison.

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE LEFT FRONT PAWS

Radiographs of the front paws in two imaging planes are provided for review.

BREED

Shepherd, German

RADIOGRAPHIC FINDINGS

The proximal phalanx of the third and fourth digit present with solid periosteal new bone formation along the diaphysis. Mild periosteal new bone formation is seen along the abaxial aspect of the proximal diaphysis of the middle phalanx of the fourth digit.

The remainder of the osseous and soft tissue structures of the left front paw are within normal limits.

SEX

M

RADIOGRAPHIC DIAGNOSIS

- Periosteal new bone formation proximal phalanx digit III&IV and middle phalanx fourth digit

AGE

10 Years

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The periosteal new bone formation along the digits can be a sequela to local inflammatory reaction or preceding trauma, a potential can be hypertrophic osteopathy – rule out pulmonary or abdominal pathology as underlying source.
