

PRESENTING CLINICAL SIGNS

PATIENT

Junior Villamarzo

History: here for bw and rads rads thickened small intestine

Abnormal PE/Chem/CBC/UA Results: cbc/chem/T4/fpl NSF advise o on results metronidazole susp 1.3ml PO BID x 10 days panacur susp x 5 days 2.75ml PO prednisolone susp 1ml PO SID x 5 days tapered, may increase thirst urine and appetite

SPECIES

Feline

RADIOGRAPHIC STUDY OF THE THORAX AND ABDOMEN

BREED

A complete set of radiographs of the thorax and abdomen is provided for review.

DSH

RADIOGRAPHIC FINDINGS

Thorax

SEX

The surrounding bony structures are within normal limits.

Neutered Male

The extrathoracic soft tissues present homogeneous without abnormalities.

AGE

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

14 Years

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

INTERPRETED BY

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

HOSPITAL NAME

Abdomen

Animal Paradise H

The intervertebral disc space L7/S1 is moderately narrowed and the subchondral bone of the respective vertebral endplates presents moderate sclerosis.

REFERRING VET

Dr. Kristin Hellwarth

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

INVOICE

The liver is appropriate in position, size and presents uniform opacity.

13347

The splenic head is in the anticipated position and within normal limits for size and opacity.

DATE

9/28/21

PATIENT

Junior Villamarzo

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and presents normal content.

SPECIES

Feline

The small intestinal loops are of even diameter and non-dilated, and appear rigid.

The colon is seen in the expected position and presents with appropriate content.

BREED

DSH

RADIOGRAPHIC DIAGNOSIS

- Rigid appears small intestinal loops
- Chronic discopathy lumbosacral junction
- Normal thorax

SEX

Neutered Male

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The rigid appearing small intestinal loops is a subjective finding but may be caused by mural changes of the small intestinal tract or adynamic small intestinal loops. Depending on clinical signs, an abdominal ultrasound examination can be used to check for alterations of the normal wall layering of the small intestinal tract (e.g. chronic inflammatory versus neoplasia).

AGE

14 Years

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
