PRESENTING CLINICAL SIGNS

Nico presents today for evaluation of a limp several days after boarding. He was boarding for 10 days. He was picked up this past Monday and the boarding facility informed the owner of the limp. The owner has noted that he would limp after jumping on/off of the couch and that it was most prominent after he would rise from sleeping, resting for a while. He has been hesitant to jump on and off of the couch. **No gait abnormality observed**. **BCS 5 / 9**. Weight is stable

RADIOGRAPHIC STUDY OF THE THORACIC&LUMBAR SPINE

A complete set of radiographs of the thoracic & lumbar spine is provided for review.

RADIOGRAPHIC FINDINGS

The osseous and surrounding soft tissue structures of the thoracic & lumbar spine present without abnormalities. The osseous margins are smooth, and the intervertebral disc spaces present with the expected even width.

RADIOGRAPHIC DIAGNOSIS

- Normal thoracic spine
- Normal lumbar spine

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the thoracic and lumbar spine present without abnormalities. If there is strong clinical suspicion for compressive myelopathy, consider complementing workup by cross-sectional imaging of the spine. Rule out pathology of the limbs as well.

PATIENT

Nico Sanzgir

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
