

PATIENT PRESENTING CLINICAL SIGNS

Millie Colucci History: Acute LTL lameness with swelling palpated over left carpus, and painful on PE.
Abnormal PE/Chem/CBC/UA Results:

SPECIES RADIOGRAPHIC STUDY OF THE CARPAL JOINTS

Canine A full set of radiographs of the carpal joints is provided for review.

RADIOGRAPHIC FINDINGS

BREED

Golden Retriever At the lateropalmar aspect of the left carpal joint, a moderate homogeneous soft tissue swelling is seen. Mild enthesiophyte formation is present at the distal aspect of the accessory carpa bone of both carpal joints. The remainder of the osseous structures of both carpal joints are within normal limits.

SEX RADIOGRAPHIC DIAGNOSIS

Spayed Female

- Soft tissue swelling lateropalmar aspect left carpal joint
- Mild ethesiophyte formation accessory carpal bone bilaterally

AGE

5.5 Years

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Potentials for the soft tissue swelling include inflammation, trauma or neoplasia, there is no evidence of osseous involvement. In case of strong clinical suspicion of instability of the left carpal joint, stressed radiographs under general anesthesia are recommended. FNA sampling can be used as an additional diagnostic test, if applicable.
