

PATIENT

Hazel Bishop

PRESENTING CLINICAL SIGNS

Non weight bearing lameness left front paw. Painful on palpation of carpus between digits 2-3.

RADIOGRAPHIC STUDY OF THE CARPAL JOINTS

SPECIES

Canine

Radiographs of the carpal joints in two orthogonal imaging planes are provided for review.

RADIOGRAPHIC FINDINGS

There is a breed specific chondrodystrophic conformation of the osseous structures.

BREED

Basset X

Both carpal joints present smooth osseous margins and no abnormalities of the surrounding soft tissue structures are appreciated.

The osseous and soft tissue structures of the front paws are within normal limits.

SEX

FS

RADIOGRAPHIC DIAGNOSIS

- Normal carpal joints & front paws

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the carpal joints & front paws presents without abnormalities, explaining the front limb lameness. There is no evidence of fracture or overt soft tissue swelling.
