

PATIENT

Georgia Holliday

PRESENTING CLINICAL SIGNS

Heart murmur grade 2-3/6 diagnosed since long time ago. No history of coughing or hacking. No history of exercise intolerance. Otherwise appear healthy, Ok for vaccines

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX AND ABDOMEN

An overview study including the thorax and abdomen in three imaging planes is provided for review. The lateral projections are moderately rotated.

BREED

Yorkshire Terrier Mix

RADIOGRAPHIC FINDINGS

Thorax

The surrounding bony structures are within normal limits.

SEX

Spayed Female

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

AGE

2 Years

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

HOSPITAL NAME

St. Catherine's Animal
Hospital

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

REFERRING VET

Dr. Brekhit

Abdomen

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

INVOICE

47353

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

DATE

9-9-21

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary

**PATIENT**

Georgia Holliday

bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and presents normal content.

SPECIES

Canine

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

BREED

Yorkshire Terrier Mix

RADIOGRAPHIC DIAGNOSIS

- Normal thorax
- Normal abdomen

SEX

Spayed Female

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The current radiographic study of the thorax and abdomen presents without abnormalities, although evaluation of the heart on the lateral projections is limited by rotation no overt cardiac chamber enlargement or abnormal size of the vascular structures is appreciated. A cardiac echo can be used for further evaluation of the cardiac murmur.

AGE

2 Years
