9 Years

PRESENTING CLINICAL SIGNS

History: Note for add on CT of cervical region: Presented 9/27/21 for lethargy and hyporexia, pain on left lateral flexion of neck, pain on cervical spinal palpation. Historical Valley Fever but not on Fluconazole at the time. Was started on Carprofen, Gabapentin and Methocarbamol. Bloodwork profile performed- Valley Fever titer IgG positive 1:4, no other significant findings. Rechecked 10/4/21- improved energy but still painful, painful on left lateral flexion of neck, hesitant to turn head to the left when walking. Switched pet to Prednisone and started Fluconazole 310mg BID. Improved but still neck pain noted at home, elected CT scan 10/29/21.
Abnormal PE/Chem/CBC/UA Results:

COMPUTED TOMOGRAPHIC STUDY OF THE CERVICAL SPINE

A high-resolution plain CT study of the cervical spine is provided for review.

COMPUTED TOMOGRAPHIC FINDINGS

Mild peripheral mineralization of the dural tube is seen along C2 to C4. The remainder of the osseous and soft tissue structures of the neck present without abnormalities.

COMPUTED TOMOGRAPHIC DIAGNOSIS

- Incidental mild dural mineralization

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The CT study of the neck presents without clinically relevant pathology. If there is strong clinical suspicion for compressive myelopathy, complementing workup by a myelographic CT study or MRI study of the spine is recommended.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.
