

**PATIENT PRESENTING CLINICAL SIGNS**

**PATIENT** Graham Aguilar Reason for Visit: vomiting & Diarrhea History: 8 m Labradoodle presented for having diarrhea and vomiting onset Saturday. Still eating and drinking fine. O could not bring stool sample due to how liquidy it was. Pet does not tolerated rear being touched. O started rice and pumpkin to the diet yesterday. No change in diet, no new treats, no exposure to other dogs (i.e. no dog park

**SPECIES** Canine Abnormal PE/Chem/CBC/UA Results: Hydration: Adequate Mentation: BAR EENT: OU clear. AU clear, no debris. No cough on tracheal palpation. Oral cavity: No dental tartar. Lymph Nodes: Submandibular, prescapular and popliteal lymph nodes normal size, shape and consistency Skin: Healthy hair coat. No ectoparasites seen, skin clean dry and intact. CV/Respiratory: Normal heart rate and rhythm, no murmur, pulses strong and synchronous, normal bronchovesicular sounds.

**BREED** Labradoodle Abd/GI: Soft, non-painful, no fluid wave, no palpable masses or organomegaly. Uro/Perineum: No lesions or abnormalities. Musculoskeletal: BCS = 5/9. Ambulatory x 4, normal gait, normal palpation all 4 limbs. Neurological: Alert and appropriate. No deficits noted.

**SEX RADIOGRAPHIC STUDY OF THE ABDOMEN AND COLLIMATED THORAX**

**SEX** Male Orthogonal views of the abdomen and collimated thorax are available for review totaling 3 images.

**AGE RADIOGRAPHIC FINDINGS**

**AGE** 8 Months The stomach contains a small amount of gas admixed with a small portion of heterogeneous soft tissue opaque ingesta material, which redistributes normally with the patient position.

The small intestines are normally distributed, of normal diameter, contain a small amount of gas, and homogeneous soft tissue fluid material.

The descending colon is predominately gas -filled with minor soft tissue opaque fecal material. No evidence of radiopaque foreign material or mechanical gastrointestinal obstruction.

The abdominal serosal detail is normal.

The liver, spleen, and renal silhouettes are normal.

The urinary bladder is empty.

The abdominal serosal detail is normal.

The urinary bladder is mildly distended, with the apex in the plane of L7, and is homogenously soft tissue opaque.

The visible portion of the cardiac silhouette, pulmonary parenchyma, and pulmonary vessels are normal.

**INVOICE** The skeletal structures are unremarkable.

56336 No other abnormalities are identified.

**PATIENT**

Graham Aguilar

**RADIOGRAPHIC DIAGNOSIS**

- Normal abdominal radiographs.
- Normal collimated thorax.

**SPECIES**

Canine

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

No radiographic signs of abnormalities are noted in the gastrointestinal tract. Primary differentials include inflammatory gastroenteritis, dietary indiscretion, and infectious parasitic (e.g., *Giardia*) and could be correlated to the clinical signs.

**BREED**

Labradoodle

An abdominal ultrasound may be useful to evaluate the gastrointestinal tract, including gastrointestinal wall layering and thickness. Considerer direct wet-prep examination, fecal ELISA testing, and zinc sulfate centrifugation (for *Giardia*) to look for GI parasites.
