

PATIENT PRESENTING CLINICAL SIGNS

Beau Kratofil Several week history of decreased energy/exercise intolerance. O is worried about cardiac disease. No murmurs heard at this time.
Abnormal PE/Chem/CBC/UA Results: CHEM/CBC - WNL Heartworm test - NEG

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX

Orthogonal views of the thorax are provided for review totaling two images. One right lateral, and one ventrodorsal view.

BREED

Australian Cattle Dog

RADIOGRAPHIC FINDINGS

The cervical and thoracic trachea is normal.

SEX

There is a mild diffuse bronchial pattern throughout the pulmonary parenchyma.

NM

The cardiac silhouette spans approximately 55% of the thoracic width, 3.0 intercostal spaces, with normal shape. (VHS = 10.6; VLAS = 1.8). The pulmonary vessels are normal.

AGE

The pleural space and mediastinum are normal.

1.9

The diaphragm is normal.

The collimated abdomen is unremarkable.

INTERPRETED BY

Tilde Rodrigues Froes, DMV, MSc., Dr. Med Vet., Dipl. CBraRVet

The musculoskeletal structures are unremarkable.

RADIOGRAPHIC DIAGNOSIS

- Mild diffuse bronchial pulmonary pattern. The differential diagnosis includes allergic lower airway disease, chronic bronchitis, infectious bronchitis. No evidence of bronchopneumonia.
- Normal cardiac size and shape.

HOSPITAL NAME

Grove Veterinary Clinic

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The pulmonary radiographic findings could or could not be correlated to the present clinical signs of decreased energy and exercise intolerance. A medical treatment for allergic/inflammatory bronchitis, and infectious bronchitis is suggested. If the patient does not improve, consider bronchoalveolar lavage for obtaining samples for cytology, culture, and sensitivity.

REFERRING VET

Dr. Tamay Guevara

No evidence of cardiomegaly. The differential diagnosis includes cardiac disease at a stage not producing secondary radiographic changes, however, without evidence of cardiac murmur, cardiac disease is less likely.
