PRESENTING CLINICAL SIGNS

One and half year old Australian mix presented for 4 days history of inappetence and pain. On exam pain upon palpation of cranial neck and resistance of turning head towards left. Previous history of heartworm disease. Owner notes rough housing with other dog is normal.

Abnormal PE/Chem/CBC/UA Results: TP 9.3 Globulin 9.5 Tbil 1.1 ALKP <10

RADIOGRAPHIC STUDY OF THE CERVICAL AND CERVICOTHORACIC SPINE

Radiographs of the cervical and cervicothoracic spine in two imaging planes are provided for review totaling 2 images. One ventrodorsal view and one lateral view focus on cervical spine.

RADIOGRAPHIC FINDINGS
SPINE

C1-C7 and T1-T12 vertebral bodies are evaluated.

The atlas, axis and dens are unremarkable.

The vertebrae are normal in size, shape, and opacity.

No narrowed intervertebral disc spaces are seen.

Normal alignment.

No traumatic or aggressive osseous lesions.

No asymmetric soft tissue swelling identified.

The collimated thorax is unremarkable.

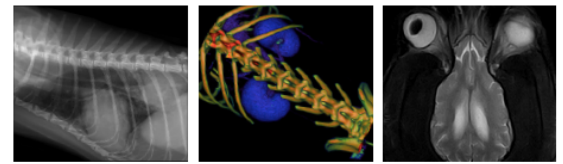

RADIOGRAPHIC DIAGNOSIS

- Normal cervical and cervicothoracic spine.
- No evidence of radiographic abnormalities.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The cervical and cervicothoracic spine are unremarkable. No traumatic osseous lesions or asymmetric soft tissue swelling were identified. No vertebral abnormalities identified to explain the clinical signs of cervical resistance or pain.

If any neurological signs are identified, consider neurolocalization and cross-sectional imaging for further analysis. Plain radiographs do not rule out ANNPE, medullary trauma, hemorrhagic, neoplastic, inflammatory, infectious, or other causes of myelopathy.
